**Course:** Gen AI Test Tool Developer [AI Agentic Workflows]

**Topic: RAG & Vector DataBases**

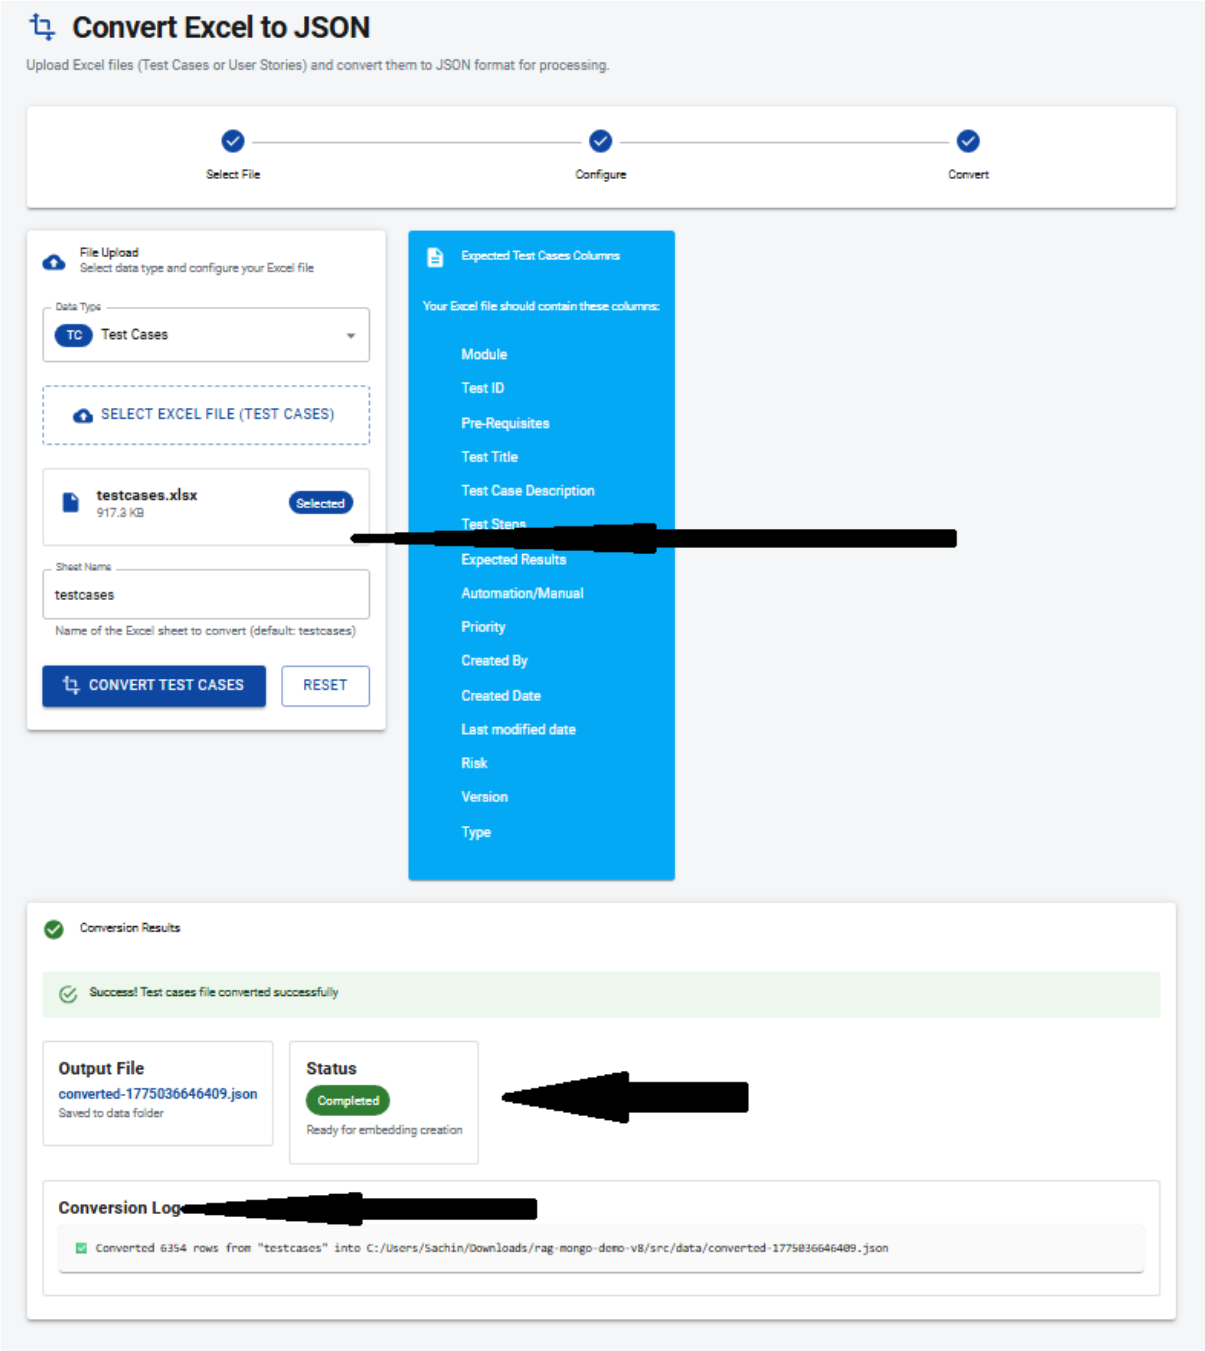
**Live Session Date:** 29th March 2026

## Assignment: Week-2

**Assignment Details:** Execute the "Ingestion" stage in RAG Pipeline by –

1. Converting the input data (test cases & user stories) into JSON format.
2. Selecting these JSON files to create embeddings by an embedding model.
3. Storing them in MongoDB Atlas Vector Database. i.e. Ingesting into Mongo DB with embeddings.

**Test-Cases in Excel format Converted to JSON format**



# User-Stories in Excel format Converted to JSON format

## Convert Excel to JSON

Upload Excel files (Test Cases or User Stories) and convert them to JSON format for processing.

Select File — Configure — Convert

**File Upload**
Select data type and configure your Excel file

Data Type: US User Stories

SELECT EXCEL FILE (USER STORIES)

**userstories.xlsx** 25.6 KB — Selected

Sheet Name: stories

Name of the Excel sheet to convert (default: stories)

CONVERT USER STORIES | RESET

**Expected User Stories Columns**

Your Excel file should contain these columns:

- Story ID / Key
- Summary / Title
- Description
- Status
- Priority
- [illegible]
- Reporter
- Story Points
- Components
- Labels
- Sprint
- Epic
- Acceptance Criteria
- Created Date
- Updated Date

**Conversion Results**

Success! User stories file converted successfully

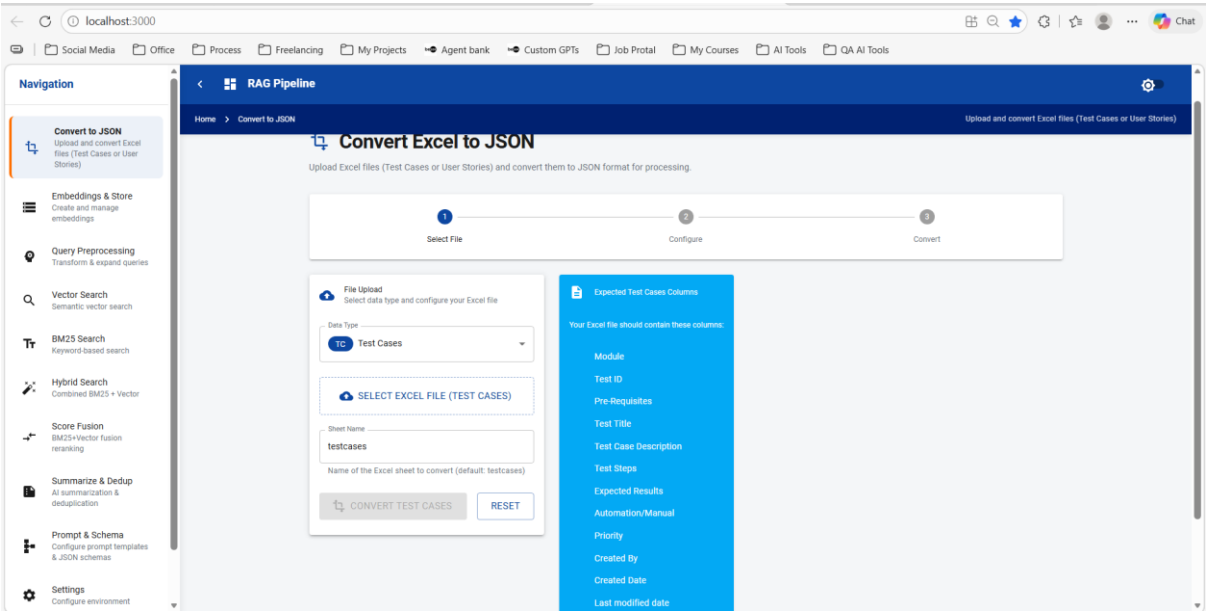
**Output File**
stories-1775036285732.json
Saved to data folder

**Status**
Completed
Ready for embedding creation

**Conversion Log**

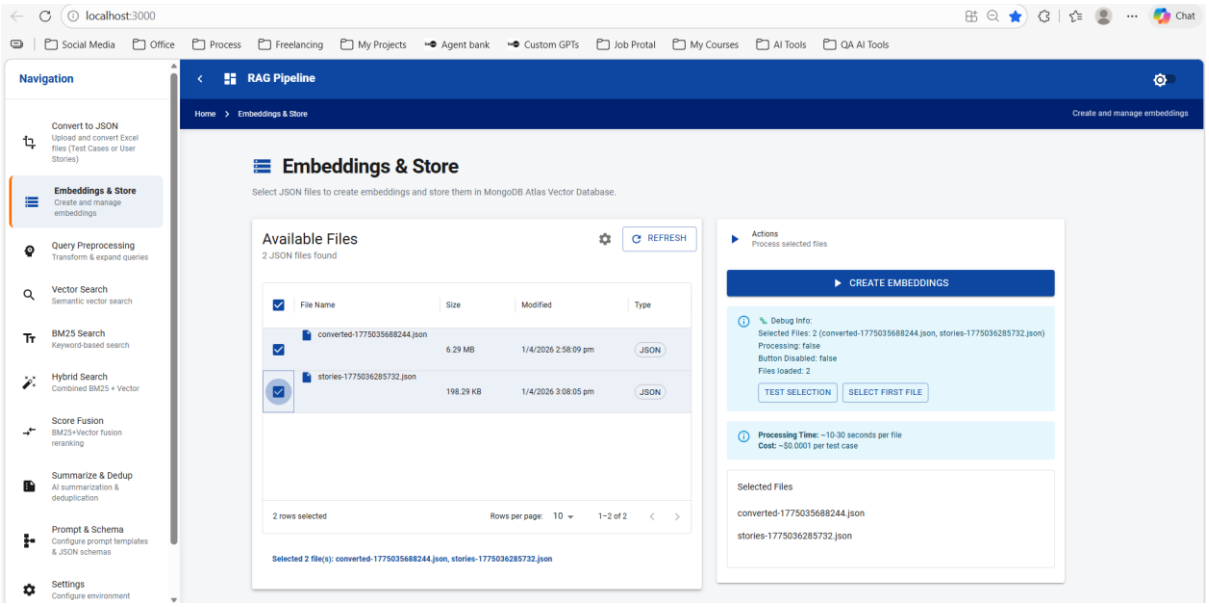
```
Converting 190 rows from sheet "stories"...
Converted 190 user stories from "stories" into C:/Users/Sachin/Downloads/rag-mongo-demo-v8/src/data/stories-1775036285732.json
Filtered out: 0 empty rows
```

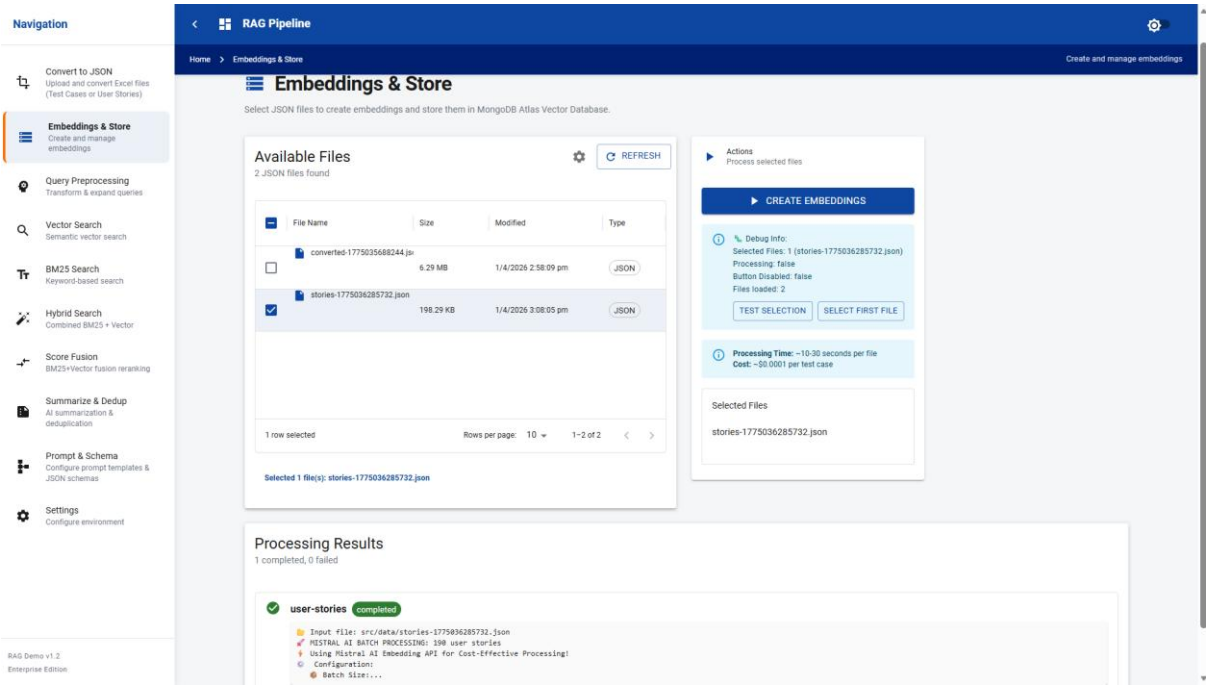
## Enterprise Edition App for Converting the Test-Cases and User-Stories From Excel format into JSON format

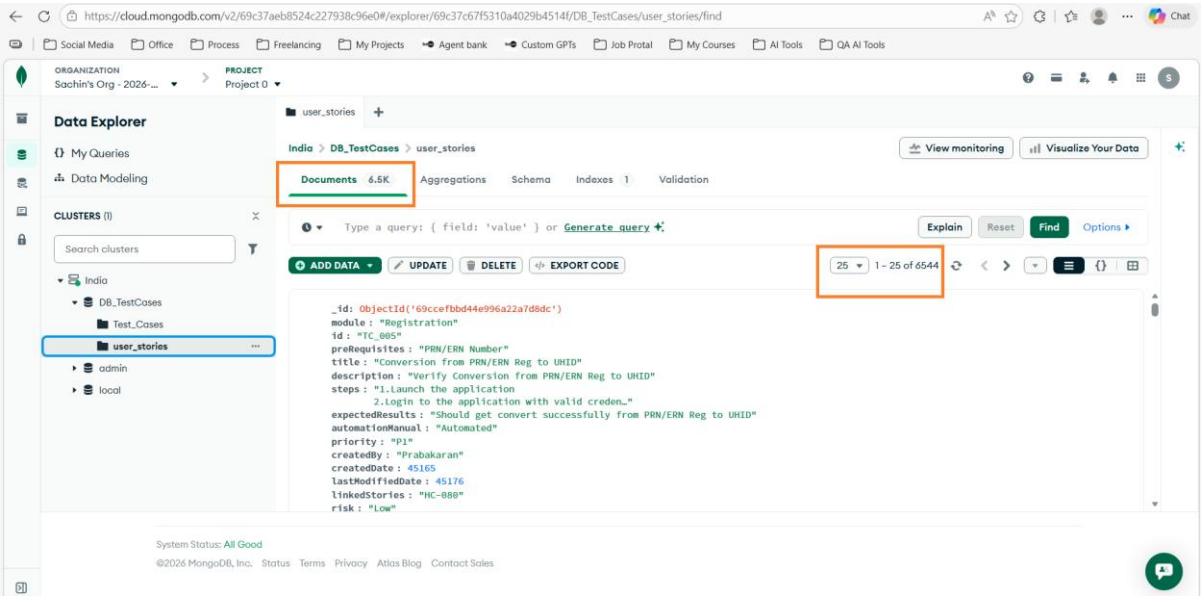


## Embeddings & Store

**Selected the JSON files to create embeddings and stored them in MongoDB Atlas Vector Database.**







**Ingested into Mongo DB with embeddings**
